Jeff,

I was able to view the page in wcms and the iframe looks to be working correctly. The CLICK HERE for full-screen map works as well, but I would change the target to open in a new window since there is no way to navigate back to the epa.gov page from the application itself.

Remember, you are looking at content now of a test layer. The viewer
that we are polishing up will have information regarding that feature.

Those features are also displayed in the legend so users will know
what those points are representing.

Only that point has information. The other locations do not have
information to show about it they are just locations of command
posts.

Noticed...

on the pink dot on the map has information if clicked.

Is this because it's a test?

Clicking any other dot, or anywhere else on the map, it says "No
information available."

Jeff, I will have the team send you the line of code for your testing
purposes.

The embedded viewer will be a test viewer since we are polishing
up content. Once we feel like we have a final draft we will replace

a line of code and perform the final check with you guys.

SADIE, that is in the OPS viewer is going to be replaced with a webpage based analytical report. Over the course of a few days (possibly by Monday) we will finished QC'ing the latest monitoring data and working through the data differences between the three regions.

Eric/Marty/Janine,

If there is anything you want to add or about this please chime in.

Thanks everyone,

Dan
